**SYMPTOM DESCRIPTION**

Some of the above CVPAMs may contain software that may prevent the camera signal from passing through to the media screen under certain conditions. If installed in a vehicle, the vehicle operator will notice that the rearview image is not displayed if attempting to reference the image while backing. If this warning is not heeded, backing up without verifying it is safe to do so could lead to an increased risk of a crash or injury to people outside the vehicle.

The condition described above does not comply with Federal Motor Vehicle Safety Standard (FMVSS) No. 571.111 S6.2.6 requires that "The rear visibility system default to the rearview image being visible and meet the requirements of FMVSS No. 571.111 S6.2.1 (field of view) and S6.2.2 (image size) at the beginning of each backing event, regardless of any modifications to the field of view that the driver had previously selected." Vehicles with suspect CVPAMs may not display the rearview image during a backing event under certain conditions.
